B.E. Information Technology (2025), MVSR Engineering College

Cover Letter: Front-end Developer

POOLit Remote (India) 2026-08-22

I am applying for the Front-end Developer role at POOLit. I graduated in 2025 with hands-on experience in React, Next.js, JavaScript, HTML5, CSS3, and Bootstrap — and I have reviewed the POOLit app on mobile.

I am a 2025 B.E. graduate based in Hyderabad with internship experience building web interfaces at RCI (HTML, CSS, JavaScript, Bootstrap) and full-stack academic projects with live browser UIs. I have built React and Next.js applications with component-based architecture and API integration, and I am comfortable debugging, collaborating in agile teams, and shipping maintainable front-end code.

- **Built responsive web interfaces for a secure intranet platform**, with HTML5, CSS3, JavaScript, and Bootstrap at RCI (Research Center Imarat).
- **Delivered a full-stack web application with live inference UI**, achieving 93.7% accuracy in an academic CV project (github.com/iamsankeerth/Major-Project).
- **Integrated front-end workflows with REST APIs**, across enterprise systems at CloudSire Solutions.

POOLit needs front-end engineers who can ship polished React/Next.js experiences for a mobile-first community product. I would contribute with solid JavaScript fundamentals, Next.js experience, attention to UI detail, and remote collaboration from Hyderabad. I am applying after my priority Huvo AI application and am available to start immediately.

I would welcome the opportunity to discuss how my React and Next.js experience can support POOLit's product development.
