Education

Maturi Venkata Subba Rao Engineering College, Hyderabad

Dec 2021 – May 2025

Bachelor of Engineering in Information Technology

- **Cumulative GPA:** 8.2/10.0
- **Coursework:** Database Management, Data Structures And Algorithms, Computer Networks, Object-Oriented Programming, Machine Learning

Narayana Junior College, Hyderabad

May 2021

TSBIE:968/1000

Narayana High School, Hyderabad

May 2019

SSC:9.7/10.0

Technical Skills And Interests

Programming Languages: C, Python, Java,

Databases: Mysql, SQL Server

AL/ML: Machine Learning, Pandas, Numpy, NER, OCR, NLP, IDP

Tools And Technologies: Pyspark, SQL, Flask

Projects

Info Verify

GitHub Repository

- Developed an AI-driven Intelligent Document Processing (IDP) system using Python, PaddleOCR, regex, and to automate extraction and verification of key data from semi-structured recruitment documents including Aadhar cards, marksheets, and GATE scorecards..
- Implemented a real-time verification pipeline with React and Python Flask, integrating OCR, NER, and regex-based validation, and deployed the system using Heroku/Render, ensuring fast, accurate, and scalable document validation for high-volume use cases like DRDO's recruitment workflow.
- Integrated rule-based and NER-driven validation modules to cross-verify extracted entities (e.g., name, DOB, ID numbers) against reference datasets, ensuring data consistency and authenticity across multiple document types.

Crop Disease Prediction

GitHub Repository

- Designed a Crop Disease Detection System using Convolutional Neural Networks (CNNs) to classify plant diseases from a curated dataset of crop images, addressing accuracy issues in traditional diagnosis methods.
- Preprocessed and augmented image datasets using techniques like resizing, normalization, and rotation, enhancing model generalization and reducing overfitting during training.

Fuel Efficiency Prediction

GitHub Repository

- Built a Fuel Efficiency Prediction System using TensorFlow/Keras-based Artificial Neural Networks (ANNs) to predict Miles Per Gallon (MPG) from large-scale vehicle datasets, improving accuracy over traditional regression approaches
- Developed scalable preprocessing and feature engineering workflows using Pandas and NumPy, including normalization, and categorical encoding to optimize model performance and training stability

Certifications

AI-ML Virtual Internship Certification by EduSkills

Java Programming by Great Learning

Extra-Curricular And Volunteering

Student Coordinator for ICACI (International Conference on Advances in Computational Intelligence)
