Transportation Representative, GSF MENA_ANow
Amazon (ASSPL) — Network Operation Center
Telangana, India (Virtual)

Dear Hiring Team,

I am writing to apply for the Transportation Representative role (Job ID 10478390) within Amazon's Network Operation Center in Telangana. I recently completed my B.E. in Information Technology from MVSR Engineering College in Hyderabad, and I am intentionally pursuing an **operations and logistics career** where I can contribute through coordination, clear communication, and data-informed problem-solving. Amazon's NOC mission — ensuring timely freight movement, resolving exceptions in real time, and driving process improvements from network data — aligns closely with how I have approached work in my internships.

At **CloudSire Solutions**, I served as an Integration Engineer Intern supporting workflows across **Salesforce, Jira, Mailchimp, ServiceNow, Slack, and Outlook**. My day-to-day work involved coordinating between business stakeholders and technical teams, querying systems to investigate issues, escalating exceptions, and following through until resolutions were delivered. I automated repetitive lead-handling and ticket-creation steps — experience that taught me how small process gaps can disrupt downstream operations, and how disciplined follow-through keeps stakeholders informed. While this was not logistics work, the pattern of **real-time issue resolution, cross-team communication, and process improvement** maps directly to what a Trans Ops Representative does when freight exceptions occur between carriers, vendors, and fulfillment centers.

At **Poditivity Connect**, I worked in the **Founder's Office**, where I conducted market research, analyzed trends, and prepared reports and presentations for senior leadership using Excel and PowerPoint. I also coordinated cross-functional teams on operational initiatives and, in a growth role, used engagement data to increase social media performance by 40%. This experience strengthened my ability to synthesize data into clear narratives, communicate variances to goals, and work collaboratively under deadlines — skills the NOC role emphasizes in weekly review forums and stakeholder updates.

I bring a solid analytical foundation, including proficiency in **SQL** and hands-on data validation on large datasets during my SDE internship at Samyama.ai. I am comfortable learning new operational tools quickly and am fully prepared to work in a **24x7 operating environment**,

including shift rotations. I am based in **Hyderabad, Telangana**, and the virtual posting is an excellent fit.

I want to be direct: I do not yet have hands-on transportation or supply chain operations experience, and I am not presenting my IT background as a substitute for logistics expertise. What I offer is a proven ability to **coordinate across stakeholders, investigate issues systematically, communicate clearly under pressure, and improve processes** — combined with genuine enthusiasm to build logistics domain knowledge at Amazon. I would welcome the opportunity to contribute to inbound and outbound operations within the NOC and grow into a strong Trans Ops professional.

Thank you for considering my application. I look forward to the opportunity to discuss how my coordination, analytical, and communication experience can support Amazon's transportation network.

Sincerely,
Sankeerth Masetty
