B.E. Information Technology (2025) | MVSR Engineering College, Hyderabad | **Based in Hyderabad — open to on-site, hybrid, or remote across India**

PROFESSIONAL SUMMARY

B.E. Information Technology graduate with hands-on experience in **Python, deep learning experimentation, and video processing pipelines**. Fine-tuned language models and evaluated production trade-offs at Samyama.ai; built repeatable API-driven workflows translating business requirements into reliable outputs at CloudSire Solutions. Delivered a live **video inference system** (OpenCV, MediaPipe, CNN-LSTM) achieving 93.7% accuracy. Comfortable working across engineering and stakeholder boundaries — iterating on ambiguous requirements, designing workflows, and shipping technical solutions. Seeking a **Forward Deployed Engineer** role at sync. to help adapt AI models to real production use cases while growing in computer vision and partner-facing delivery.

EDUCATION

Degree	Specialization	Institute	Year	CPI
B.E.	Information Technology	MVSR Engineering College	2021–2025	7.42
Intermediate	Physics, Chemistry & Mathematics	Sri Chaitanya College	2019–2021	9.45
SSC	—	Sri Chaitanya School	2019	8.8

EXPERIENCE

SDE Intern — Samyama.ai | Nov 2025 – Jan 2026

- Built and fine-tuned a domain-specific **Small Language Model** in Python using Transformers; experimented with structured JSON outputs and evaluated model behavior across training iterations.
- Generated and validated a **35,506-record** synthetic dataset with schema compliance checks — experience relevant to curating and quality-checking training data for model adaptation.
- Compared SLM vs. generic LLM architectures for **latency vs. cost trade-offs**, supporting production-oriented deployment decisions.

Integration Engineer Intern — CloudSire Solutions LLP | Nov 2023 – May 2024

- Designed and built **repeatable integration workflows** connecting Salesforce, Jira, Mailchimp, ServiceNow, Slack, and Outlook via REST APIs — translating ambiguous business requirements into reliable, automated pipelines.
- Debugged end-to-end data flows across distributed systems; iterated with cross-functional stakeholders to refine workflow behavior and resolve production issues.
- Used **Git** for version-controlled delivery; documented integration logic for maintainability across projects.

Founder's Office Intern — Poditivity Connect | Oct 2024 – Mar 2025

- Worked in an **early-stage startup** (YC-adjacent environment); coordinated cross-functional teams and communicated technical and business insights to leadership.
- Translated market research and product feedback into actionable recommendations — experience relevant to understanding partner needs and iterating on deliverables.

Front-end Engineer Intern — RCI | 2023

- Built user-facing web features with Django, HTML5, CSS, and JavaScript; collaborated with backend developers on requirements and iterative fixes based on stakeholder feedback.

PROJECTS

Bridging Learning Gaps: Web App for Deaf and Mute Students in Tamil (Major Project)

- Built a **live video processing pipeline** using **OpenCV** and **MediaPipe** with a **CNN-LSTM** deep learning model for real-time gesture recognition; achieved **93.7% accuracy**.
- Deployed end-to-end via **Flask** — from video capture → model inference → structured output — directly relevant to adapting AI models for production video workflows.

MalFoyle: Python-Based Malicious File Detection System

- Developed an automated analysis tool with hash/signature scanning, Yara rule detection, and structured reporting — demonstrates experimentation with rule-based + ML-adjacent detection pipelines.

CERTIFICATIONS

- Complete A.I. & Machine Learning and Data Science Bootcamp** — Andrei Neagoie & Daniel Bourke
- 2nd Prize**, Project Expo 2025 — *Bridging Learning Gaps* (RDC & IIC, MVSREC)

TECHNICAL SKILLS

ML & AI: Python, Deep Learning (CNN-LSTM, Transformers/SLM fine-tuning), OpenCV, MediaPipe, experimentation & model evaluation

Workflow & Integration: REST APIs, workflow automation, data pipelines, requirements translation

Web & Deployment: Flask, Django, FastAPI-style JSON APIs, Git

Languages: Python, Java, SQL, JavaScript, C

Tools: Jupyter Notebook, Postman, Celigo

Concepts: Model adaptation, production trade-offs, cross-functional delivery, iterative experimentation
