B.E. Information Technology (2025), MVSR Engineering College

Cover Letter: Software Engineer

Navtech Hyderabad 2026-08-22

I am applying for the Software Engineer role at Navtech. I am a 2025 B.E. graduate based in Hyderabad with internship experience in Python backend development, API integrations, and domain-specific language model work.

Navtech's focus on domain-specific language models and production enterprise software closely matches what I have been building. At Samyama.ai I developed Python components for a domain-specific language model with Transformers and structured data validation. At CloudSire I built REST API integrations across enterprise systems. At RCI I delivered a Django web application with real-time workflows and production troubleshooting.

- **Built domain-specific language model components in Python**, with Transformers and validation across 35,506 training examples at Samyama.ai.
- **Developed REST API integrations across enterprise platforms**, automating ~100 tickets weekly and cutting manual handoffs by 45% at CloudSire Solutions.
- **Delivered a Django web application**, with real-time workflows and secure authentication at RCI (Research Center Imarat).

I want to grow as a Python engineer on backend services, APIs, and AI-driven enterprise applications — including ERPNext and the Frappe ecosystem. I bring strong fundamentals, a learning mindset, and Hyderabad-based availability. I am prioritizing applications in sequence and would welcome Navtech after my current Huvo AI application progresses.

I would welcome the opportunity to discuss how my Python internship experience and DSLM-adjacent work can support Navtech's engineering team.
