Analytics & Risk Apprentice Program
American Express
Gurugram, India

Dear Hiring Team,

I am writing to express my strong interest in the Analytics & Risk Apprentice Program at American Express in Gurugram. As a final-year B.E. Information Technology student with hands-on experience in data analysis, generative AI, and business-facing reporting, I am excited by the opportunity to learn how analytics and risk thinking support customer outcomes across US Consumer Services. The program's blend of marketing analytics, product analytics, and control management aligns closely with my curiosity for turning data into clear, actionable insights.

During my SDE internship at Samyama.ai, I worked with Python to build and fine-tune a domain-specific Small Language Model, generating and processing a 35,506-record synthetic dataset with a focus on schema compliance and data quality. I evaluated model performance trade-offs between SLM and generic LLM architectures, balancing accuracy, latency, and cost—experience that strengthened my analytical mindset and my practical understanding of how generative AI can support research and structured analysis. This work, along with my certification in AI, machine learning, and data science, has given me a solid foundation in the technical tools the role values, including Python, SQL, and LLM-based applications.

Beyond technical projects, I have applied analytical skills in business settings. As a Founder's Office Intern at Poditivity Connect, I conducted market and competitive research, prepared reports and presentations for senior leadership using Microsoft Excel and PowerPoint, and coordinated cross-functional teams on strategic initiatives. In a growth role at the same organization, I used data-informed content strategy to increase social media engagement by 40%. My major academic project—a CNN-LSTM sign language recognition system achieving 93.7% accuracy—further reinforced my ability to work rigorously with data, evaluate results, and communicate outcomes clearly.

I am enthusiastic about joining a team where curiosity, collaboration, and structured problem-solving are central to the work. I am fully willing to relocate to Gurugram for this hybrid role and am eager to contribute to reports, presentations, and analytics projects while learning from experienced professionals at American Express. Thank you for considering my application. I would welcome the opportunity to discuss how my background in analytics, generative AI, and business reporting can support the Apprentice Program.

Sincerely,
Sankeerth Masetty
