Software Engineering Hiring Team
Thermo Fisher Scientific
Bangalore, India

Dear Hiring Team,

I am writing to express my interest in the **Engineer 1, Software** role at Thermo Fisher Scientific in Bangalore. As a B.E. Information Technology graduate with hands-on experience building web applications, REST API integrations, and backend services in Python and Java, I am excited by the opportunity to contribute to software that supports laboratory instruments, cloud platforms, and enterprise systems. Thermo Fisher's mission to enable healthier, cleaner, and safer outcomes through scientific innovation aligns strongly with the kind of meaningful engineering work I want to grow into as a fresher software engineer.

During my SDE internship at Samyama.ai, I developed backend pipelines and structured API outputs in Python, applying object-oriented design to separate training, evaluation, and inference workflows. I also built and validated a 35,506-record dataset with schema compliance checks and evaluated architecture trade-offs between model designs—experience that strengthened my analytical approach to software quality and maintainability. My major academic project reinforced this full-stack foundation: I deployed a Flask-based web application with live inference, REST endpoints, and a CNN-LSTM pipeline that achieved 93.7% accuracy for Tamil Sign Language recognition.

My integration engineering internship at CloudSire Solutions gave me practical experience with API-driven system design. I built REST integrations across Salesforce, Jira, Mailchimp, ServiceNow, Slack, and Outlook to automate lead routing and ticket creation, and I used Git-tracked development practices while iterating with stakeholders on business requirements. Earlier, as a front-end engineering intern at RCI, I worked with Django, HTML5, CSS, and Bootstrap to deliver responsive web features—experience that maps directly to the web technologies emphasized in your role. Across these roles, I have collaborated in cross-functional settings and communicated technical work clearly to both technical and non-technical teammates.

I am particularly drawn to Thermo Fisher's R&D culture and the chance to learn enterprise-grade software practices—including Java ecosystems, agile delivery, and cloud-native tooling—while contributing from day one as a motivated fresher. I am fully willing to relocate to Bangalore and am eager to bring my foundation in OOP, data structures, REST APIs, and full-stack

development to your team. Thank you for considering my application. I would welcome the opportunity to discuss how my background can support Thermo Fisher's software engineering goals.

Sincerely,
Sankeerth Masetty
